## Special Finishes Description

**32DMS** (MicroShield®): As part of its promise to provide innovative solutions to their customers, ASSA ABLOY Group companies offer the MicroShield® technology, a silver-based antimicrobial coating designed to inhibit the spread of germs and bacteria.

**32316** and **32D316** are made from alloy 316 stainless steel containing molybdenum and extra nickel giving it substantially higher corrosion resistance than the standard stainless steels typically used in door hardware. This finish is ideal for use in coastal, urban, and industrial areas that have harsh environmental conditions. **32316** (polish) finishes offer the best corrosion resistance and should be used in caustic environments.

**10BE** Dark Oxidized Satin Bronze equivalent: This finish provides the richness and warmth of the 10B/613 "living" finish, but maintains its original color and appearance and will not fade or wear over time. The 10BE finish is offered by Corbin Russwin, McKinney, Norton, Rixson, Rockwood, SARGENT and Yale, providing visual consistency between ASSA ABLOY Group brands.

\* On most bronze finishes we will supply solid bronze material. Where solid bronze material is not available, we will use brass as a base material with a bronze look powder coat in its place.

\*\*\* Available on select items as indicated by the finish icon throughout the catalog.

This finish is ideal for use in coastal, urban, and industrial areas that have harsh environmental conditions.

US3LIFETIME is a PVD (physical vapor deposition) finish on either stainless steel or chrome plated brass base material. The finish is a thin hard metallic film of extreme durability that looks like polished brass. US3LIFETIME brass finish will not tarnish and is ideal for use in exterior and marine environments.

\* On most bronze finishes we will supply solid bronze material. Where solid bronze material is not available, we will use brass as a base material in its place.
